===== Review 1 =====

> *** Strengths/Weakness: What are the major reasons to accept/reject the paper? [Be brief.]

This paper presents some techniques for internet charging in networks that serve traffic with different QoS requirements. The idea is interesting, but the authors fail to describe and explain their idea clearly.

> *** Contribution/s & Detailed comments: What are the major issues addressed in the paper? Do you consider them important? Comment on the degree of novelty, creativity and technical depth in the paper. Please provide detailed comments that will be helpful to the TPC for assessing the paper, as well as feedback to the authors.

The paper is not well written and it is very difficult for the reader to follow the concepts. The last paragraph in the introduction (which should contain the contribution) is too blurry, while the whole text is full of spelling and grammar errors.

Although the authors have related work in this topic (i.e., [6-11]), they do not provide any justification for the novelty of the present work compared to their previous studies.

Finally, there is no clear outcome of the paper, as both the system model and the results are hardly explained.
