Dear Prof. Imeilyana:

We have reached a decision regarding your submission to International Journal of Applied Sciences and Smart Technologies, "Independence Test and Plots in Correspondence Analysis to Explore Tracer Study Data".

Our decision is: Revisions Required

The revision is minor. Please revise your paper within 2 days. Thank you.

Prof. Dr. Sudi Mungkasi

Title and Abstract

Title Independence Test and Plots in Correspondence Analysis to Explore Tracer Study Data
Abstract

The results of the exploration of tracer study data can be used as information about the career of graduates and the relevance of work to the field of study as well as the competencies obtained before graduation. The question items discussed were a description of the time and process of looking for a job, the length of time to get the first job, the relationship between length of study, gender, field of work, total income, alumni's perception of the closeness of the field of study to work, the suitability of the level of education on the job, and average level of competence. The aim of this study was to analyze the relationship between these variables in the 2020 tracer study data from graduates of all faculties at Sriwijaya University. Respondents studied were 2,669 people. The method used is descriptive statistics, biplot analysis, independence test and plots by simple correspondence analysis. Respondents' perceptions of the suitability of the level of education in employment are related to gender and also with respondents' perceptions of the closeness of the field of study to the field of work. Meanwhile, respondents' perceptions of the closeness of the field of study with work are related to the field of work. The average length of study, the average number of job applications, the number of companies or agencies that responded to applications, and invited interviews for female respondents were lower than male respondents.
