Subject: Fwd: Submitting manuscripts in Herba Polonica
To: dr. Irsan Saleh <dr.irsansaleh@fk.unsri.ac.id>

Dear editor,

Hereby, I submit a manuscript of an article entitled " Potential of karamunting (*Rhodomyrtus tomentosa*) fraction against kidney damage in diabetic rats" . I hope it can be further processed and published in this journal. I am also enclosing the manuscript of the article in word version. Thank You

Rachmat Hidayat

Dear Dr. Hidayat,

Your manuscript have been carefully evaluated by two expert reviewers and the editors of Herba Polonica. There are minor amendment from editorial aspect. The method of writing must be adjusted to the guidelines for writing in this journal, the method of citations, writing of tables and figures and writing of references must follow the norms set out in the guidelines. Your citation and referencing style are not suitable for Herba Polonica norms. Comments from two reviewers are summarized below:

Reviewer 1:

1. The grammar used should be improved, it's a good idea to ask a native English speaker to fix it.
2. The introduction needs to be somewhat expanded and sharpened to get a sense of the importance of research for a new paradigm in the treatment of diabetic nephropathy.
3. Research methods need to be clarified how Karamunting leaf fraction are obtained.
4. The discussion should be sharpened to compare the validity of the results obtained compared to previous studies and the theoretical aspects that underlie them.
5. Conclusions need to focus on the translational aspects of humans.

Reviewer 2

1. Information about the content of the active substance which is efficacious as a protective effect on the kidneys from the active fraction of karamunting leaves is not yet available?

Reviewer 2

1. Information about the content of the active substance which is efficacious as a protective effect on the kidneys from the active fraction of karamunting leaves is not yet available?
2. How can you explain the decreased AGEs due to administration of the water fraction of karamunting leaves, not due to improved blood sugar control?
3. Why don't you include GCMS or LCMS data in your article?
4. Need improvement in the presentation of image captions, tables should also be supported with graphics to facilitate interpretation.

Decision: The manuscript needs revision. Kindly resubmit the revised manuscript along with a separate response sheet – where particular revision (page, para, lines) has been done.

Kindly resubmit your revised manuscript as early as possible preferably by 1st April, 2021, on this email..

Best wishes

Dr ANNA KRAJEWSKA-PATAN

Dear Editors and Reviewers

Thank you for very constructive comments, we have revised and improved our article according to reviewer comments. We also enclose the revised manuscript based on the feedback from the editors and reviewers. Responses to the reviewers' feedback are included in the attached response sheet. We hope that our responses are in line with the reviewers' expectations.

Regards,
Rachmat Hidayat
