Dear Dwi Setyawan,

Thank you for your manuscript: Acid mine drainage prevention through the dry coating method using fly ash and bottom ash.

The following number has been assigned to it: EEET-01478-2023-01.

The manuscript will be checked by Editors and then sent to the Reviewers.
You will be informed by email about any further decisions on this article.

Thank you for submitting your work to our journal.

Kindest regards,
Prof. Gabriel Borowski
Editor-in-Chief
Ecological Engineering & Environmental Technology

Acid mine drainage prevention through the dry coating method using fly ash and bottom ash

Dear Dwi Setyawan,

I am pleased to inform you that your manuscript, entitled: Acid mine drainage prevention through the dry coating method using fly ash and bottom ash, might be accepted for publication in our journal, pending some minor changes suggested by reviewers (see below).

Please revise your paper strictly according to the attached Reviewers comments and:

- It is required to verify the correctness of the information provided in the manuscript submission system (names and order of authors, their affiliation, latest version of the abstract, etc.)
- Citations of references in text should be identified using square brackets. Example references: Duncan W. 2018. Thermal energy from a biogas plant for leachate treatment. *Energies*, 15(3), 753–767.

Your manuscript won't be taken into consideration without the revisions made according to the recommendations.

Authors of our journal are requested to prepare a revised version of their manuscript as soon as possible. This may ensure fast publication if an article is finally accepted.

Thank you for submitting your work to us.

Kindest regards,
Prof. Viola Vambol
Managing Editor
Ecological Engineering & Environmental Technology

Please note that this email may not include all details of your article's evaluation. The full decision is available here: <https://www.editorialsystem.com/eeet/article/382754/view/#showDecisionLetter382331>

Review 1:

The structure of the study is consistent and logical; the results are scientifically substantiated; conclusions follow logically from the results and discussions.

The scientific novelty is clearly presented and well justified. This involves developing a unique mixture of materials to be used as a coating for acid mine drainage prevention. The goal of the study has been achieved.

I recommend accepting it as is, but additionally checking for grammatical and stylistic errors

Dear Dwi Setyawan,

Thank you for the revision of the manuscript: Acid mine drainage prevention through the dry coating method using fly ash and bottom ash.

The following number has been assigned to it: EEET-01478-2023-02.

The manuscript will be rated once again by the Editors and then sent to the Reviewers.

You will be informed by email about any further decisions on this article.

Kindest regards,
Prof. Viola Vambol

Dear Monika,
Thank you for sending the proof version of our article for publication in Vol. 25 issue 2. Just one insertion in Table 3 Component (%).
The rest is fine and correct.

Kindly regards
Dr. Dwi Setyawan
