ABSTRACT

Background: Based on 2010 data, the incidence of diarrhea and Acute Respiratory Infection (ARI) in South Sumatra Province is still quite high. Similarly in Ogan Ilir regency, the number of diarrhea and ARI are still quite high at 8358 and 23368 patients with diarrhea and ARI. This is probably due to the low coverage of safe water that is 39.19%, lack of knowledge society, unhealthy behaviors and other factors. So the purpose of this study was to determine the relationship between knowledge and attitudes towards Clean and Healthy Behavior in the Village Sungai Rambutan District North Indralaya Ogan Ilir in 2011.
