to me, Paula ▾

Dear Dr. Indra Yustian,

It is a pleasure to contact you to request your kind collaboration as an expert reviewer for [Marine and Fishery Sciences](#) (MAFIS), formerly Revista de Investigación y Desarrollo Pesquero of INIDEP (Argentina). We have received the manuscript ref. MAFIS-437 entitled: "Movement of the bull shark (*Carcharhinus leucas*) in the upper Mississippi River Basin, North America ", whose introduction states that:

"Bull shark fossil remains are known from the Miocene of North and South America (Cameron and Boreske 1972; Apolín et al. 2007), though fossil teeth similar to the "bull [shark] group" of species may extend the North American record of similar animals to the Eocene (Cappetta 2012). Similarly, both the Mississippi and Amazon Rivers have geological histories spanning 10 million years or more. Given these observations, it is likely that far upstream exploration of river systems by these sharks is a behavior with a long history as well. However likely this may be, it is not presently clear if the history of upstream exploration in the Mississippi River Basin is well-evidenced. "

-----

This [Editorial Committee](#) would appreciate receiving your response to review (affirmative or negative) as soon as possible by entering to this link [MAFIS](#) with:

user: **yustian**  
provisional password: **yustian1234** (system will ask you to change this password)

*In case of not being able to carry out the review, we would appreciate you suggesting some expert colleague in the field*
