Review Report

III. Overall Comments

Comment on the strengths and weaknesses of the paper, in terms of originality, significance, interest, up-to-datedness, coherence, and balanced argumentation.

The paper is well-written and the study used a big number of subjects. However, the assessment instruments used are not explained clearly. Providing some examples of the questions will definitely help readers understand the paper better. In terms of originality, the topic of the study still has something new although this kind of study has been conducted in some countries. In addition, the relation of the suggestions given in the conclusion with the results of the study is not clear. It needs some explanations so that readers will understand why such suggestions are given. From international perspectives this paper does provide significant contributions, it has high priority to publish.

IV. Suggestions for Revision

Comment on the areas that need revision (e.g. research questions, significance of the study, literature, methodology, findings, etc.) and offer suggestions for improvement. Your comments will be transmitted to the author(s) anonymously.
