Hi Najmah,

I don't actually understand what the reviewer means by these comments.

I think just answer it the best you can??

- First comments: Prediction of business as usual total death (caused by Covid-19 and other common death causes) in South Sumatra needs to accompany and verify the prediction.
- our answers:
- At the height of the pandemic it is predicted that around 250,000 people have died from co-19 (figure 9). this is very worrying when compared to other causes of death in southern Sumatra. Based on data from the Institute for Health Metrics and Evaluation it is known that the 5 most causes of death per 100,000 population in 2017 in South Sumatra are stroke (17.31%), Ischemic Heart diseases (15.91%), diabetes (5.98%), Tuberculosis (4.76%), and cirrhosis (4.07%) (IHME (Institute for Health Metrics and Evaluation), 2017)

then the reviewers comments again:

The "very worrying" term could mean overestimate prediction from modelling

Dear, Authors
ASEAN Journal of Community Engagement

We would like to give a big thanks to you that your article will be published in July 2020. And currently your articles are still in process for proofreading and editing before it is published.

And some of the authors have some concern about the notifications by email from the journal system. Which one is correct, the information manually by email or the information from the journal system.

Based on this, we would like to send our apologies to you related to this. And also we stated that please refer to the information manually by email from us since 1 month ago (approximately). For information from the journal system, please ignore it. Because we need to input the business process of the article before it publishes online on the journal website.

Hopefully this information will give a solution for your concern. Again, we apologize for the inconvenience.

Best Regards,
Editor in Chief
