CHARACTERSTICS AMONG INJECTING DRUG USERS ACCESSING AND NOT ACCESSING NEEDLE AND SYRINGE PROGRAM IN PALEMBANG, SOUTH SUMATERA

KARAKTERISTIK PENGGUNA NARKOBA SUNTIK (PENASUN) YANG AKSES DAN TIDAK AKSES LAYANAN JARUM DAN ALAT SUNTIK STERIL DI PALEMBANG, SUMATERA SELATAN

Najmah

Staf Pengajar Fakultas Kesehatan Masyarakat Universitas Sriwijaya

ABSTRACT

Background : HIV/AIDS has become one of international public health problem. One effective method to spread HIV/AIDS is through shared needle and syringe among Injecting Drug Users (IDUs). Needle and Syringe Program has been run in Palembang since 2009. Previuos research was limited towards description of IDUs in Palembang city without differentiating both IDUs accessing and not accessing Needle and Syringe Program (NSP). Objectives to identify the differences characteristiccs between characteristics of IDUs accessing and not accessing NSP

Methods : This was a case control study with respondents recruited using snowball technique. Simple and multiple logistic regression tests were performed using statistics program (Stata version 10) to identify association between NSP access status and characteristiccs of IDUs. Odds ratio, 95 % Confidence interval
