Dear Ms. Ziske Maritska

We have reached a decision regarding your submission to Pharmacology and Clinical Pharmacy Research, "Pharmacogenomic Considerations In Propofol".

Our decision is to: Article Need Revision

Reviewer 1 comments: please see the comments in the attachment file, however, she strongly recommends you improve the English quality.

Reviewer 2:

Major comment:

Introduction:

The introduction needs to clarify the (1) motivation, (2) challenges, (3) contribution, (4) objectives, and (5) significance/implication of this systematic. All the information (should be) presented in sequence idea.

Methods:

- The term scoping review must be defined and also needs a reference. What scoping review methodological framework did you use?
- What was the selection strategy for the articles?
- What was the data extraction strategy that you used?

Result

- I would highly recommend adding a table/paragraph that provides a description of the characteristics of the included studies/articles.
- Strengths and limitations of the scoping review must be acknowledged and added as well.

Minor comment:

The author should mention what kind of review used in the study

Please revise within 21 days.

Thank you very much
