y).

Regarding to the preparation of publication in IOP published, please submit your revised final manuscript. This is one of the 2nd FIRST 2018 committee responsibilities, to ensure that your paper has fulfilled the IOP standards.

For revision in your camera-ready, it is very important that you follow the reviewers' suggestions indicated in the reviews and or the mentors' directions during the coaching clinic. If there are no appropriate revisions in your final paper, your paper could be cancelled from the acceptance.

Make sure that you have submitted your final manuscript in doc and pdf format to intfirst@polsri.ac.id before December 10, 2018.

For further information, please do not hesitate to contact:

Abstract. Banyuasin Regency, one of the regencies in South Sumatera Province, has abundant natural resources such as coconut plantations that produce wastes. Mostly they are located in Rimau, Muara Telang, Tanjung Lago and Banyuasin II sub-districts. Sui Tiga Village is one of 10 villages in the Sumber Marga Telang which is a division of the Muara Telang sub-district. Currently, the potentially produced wastes are still unmanaged properly. Besides, there are also raising problems in this area, some of the coconut plantations are located in protected forest areas, there are great pressures for occupation from the community around the protected areas for cultivating crops to meet their needs, and this made deforestation and forest degradation unavoidable. One of the solutions can be offered for solving those problems is to increase the income of the forest communities, especially by utilizing the available natural resource in the area such as coconut waste water for producing nata de coco. The abundance of coconut and copra products has not been utilized, with technical assistance in the production of nata de coco, it can increase the income of the people around the forest, and therefore the pressure on the forest occupation can be decreased. Besides the waste, clean water also a problem in this area, in this program the community was also introduced a simple and reliable technology for swamp water filtration.

1. Introduction
 Banyuasin Regency is one of the regencies in South Sumatera Province. Based on data from the Central Statistics Agency of Banyuasin Regency in 2017, its area covered around 11,832.89 Km² which is located between 1.3000° - 4000° South Latitude and 1040.40° - 1050.15° East Longitude. It consists of 19 sub-districts covering 288 villages. The widest sub-district is Banyuasin II with an area of 3,632.40 Km² or around 30.70% of the total area of Banyuasin Regency. Sumber Marga Telang is the smallest sub-district with an area of 174.89 Km² or about 1.48% of the total area of the Regency [1].
 Banyuasin, apart from its geographic position, its location is also strategic; it is located on the inter-provincial traffic route. Besides, its natural resources are abundant, it is also known as the rice granary in South Sumatera. Its plantation commodities are the leading sector of this regency. According to the Central Bureau of Statistics for Banyuasin Regency in 2017, rubber, palm oil, and coconut are the
