Abstract  
References Citations Supplementary Data Suggestions

Lack of knowledge and attitudes of mothers about breastfeeding can cause mother give formula milk feeding. One of the way to increase knowledge and attitudes breast feeding is through Peer Counselling method. *Peer counselling* is one method of counselling services provided by peers who have trained to be a peer counselor. The aim of this study is to analyze the effect of peer counselling on mother's breastfeeding knowledge and attitudes. This research study was designed as a quasi-experiment. The population of this study was a group of mothers who were in reproductive age. Pre test was conducted before the intervention. Peer counselling was given for
