THE RELATIONSHIP ANTENATAL CARE VISITS WITH CAESAREAN SECTION  
DELIVERY IN INDONESIA (ANALYSIS DATA IDHS 2012)

### ABSTRACT

**Background:** The increased rates of caesarean section become public health problem because it can enhance on risk of maternal and perinatal adverse effects. Visits antenatal care need to monitor pregnancy and planned birth to know of the mother's pregnancy so that can detect early disease and maternal complications who can determine the act of delivery. Research objectives to analyze relations antenatal care visits with caesarean section delivery in indonesia from data IDHS 2012.

**Method:** This is a quantitative research using secondary data criteria of inclusion of woman age fertile 15-49 years and never giving birth to the kids are last five years survey. The cross-sectional study design with 12,536 sample women in accordance with the inclusion and exclusion criteria. Analysis of data research is done with complex simple univariate, bivariate the chi-square and multivariate regression model the Logitistics

23 factors.

**Result:** The results of analysis showed that there was significant association antenatal care visits with caesarean section delivery. However, this relationship as a protective factor, this means that women who visited antenatal care incomplete lower the risk 0.742 times smaller to made caesarean section delivery than
