Dear Dr. Faizal,

In view of your expertise I would be very grateful if you could review the following manuscript which has been submitted to Waste and Biomass Valorization.

Manuscript Number: WAVE-D-21-00558R1

Title: Emerging technologies for value-added use of oil palm biomass

Abstract: The palm oil industry has been continuing to help in mitigating poverty and drive socio-economic growth through job opportunities and infrastructure development in the suburbs. However, as the industry expands rapidly, production goes hand in hand with its waste generation. With current utilization by the mills, a large quantity of oil palm biomass is left underutilized. Existing practices allow only a proportion of the biomass used as mulching agents in plantation and fuel boilers, while trunks and fronts are left decomposed for carbon cycling. A lot of work has been done on bio-products development using oil-palm biomass, including biochar, activated carbon, bio-oil, compost, nanocellulose, biosugar, bioelectricity, biohythane, bioplastic, and bioenergy. This review puts together the latest pieces of evidence of technological progress in the valorization of oil palm biomass for value-added use.
