Livian Teddy:

We have reached a decision regarding your submission to Journal of Architectural Design and Urbanism, "The New Method in Calculating Columns and Beams Dimensions That Meets Requirements of The Strong Column-Weak Beam and Non-Soft Story".

Our decision is to accept with minor revision

Please pay your attention to the reviewer comment as below:

This article is good. I believe that it will contribute significantly advantages to the architecture science particularly to the earthquake resistant building.

However it needs several revisions :

1. Some term engineering term need to be described briefly like: soft story, strong column - weak beam, plastic hinge, and so on
2. Problem of editing need to be improved like: the strong column-weak beam should be: the strong column - weak beam

In order to avoid the delayed of publication, please send back the revision no later than 26 March 2019.

Thank you in advance
